

SUNOCO BAR & CHAIN OILS

OVERVIEW

SUNOCO BAR & CHAIN OILS are premium lubricants formulated with a robust, anti-wear additive package that has been designed exclusively for use on commercial quality chainsaws. These oils are made using the highest quality base stocks and contain a specialized wear modifier and tackifier agent that also prevent rust and corrosion and deliver outstanding performance in today's modern cutting equipment.

FEATURES & BENEFITS

SUNOCO BAR & CHAIN OILS lubricate the chains and bars on all modern and vintage chainsaws. Their superior ability to cling tenaciously to surfaces reduces resin build up and heat generation for less oil sling off and cooler operation. Less oil loss and better lubrication equals increased productivity, greater tool protection and lifespan. SUNOCO BAR & CHAIN OILS prevent premature wear, are available in multiple viscosities for differing ambient weather, and keep chains, bars, and sprockets performing at their best.

APPLICATIONS

SUNOCO BAR & CHAIN OILS are exceptionally adhesive lubricants recommended for high speed chain saws where extreme pressure and temperatures exist. They have been developed to lubricate the chain, bar guide, and drive sprocket on commercial chain saws performing at high levels, and can also be used on industrial chain drives, slides and ways.

SPECIFICATIONS

Use on all types of chain saws including those made by brands such as Craftsman, Echo, Stihl, Husqvarna, Mikita, Black & Decker, and many more.

TYPICAL PROPERTIES

Product Code	6323	6303	6273	6263
SAE Viscosity Grade	10W	20W	30W	40W
Viscosity, cSt @ 100 °C	5.6	7.8	12.0	14.8
Viscosity Index	100	100	99	99
Flash Point, °C	228	226	225	224
Pour Point, °C	-27	-24	-20	-21
